Shower Shelf Installation Guide

QR

EN Instructions
IT Istruzioni

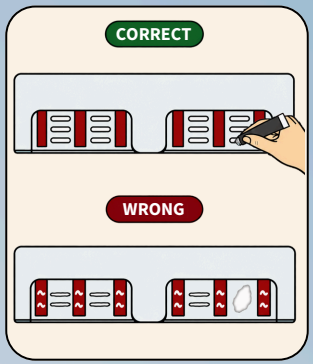

Step 1 – Prepare the wall

The surface must be **smooth** and **flat.** Clean thoroughly with isopropanol (alcohol). Then let it dry completely.

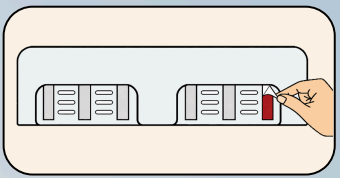

Step 2 – Apply the liquid adhesive

Apply the liquid adhesive **thickly** in lines **between** the adhesive pads. The adhesive should be slightly higher than the adhesive pads so that it spreads well when pressed on.

Step 3 – Peel off the protective film

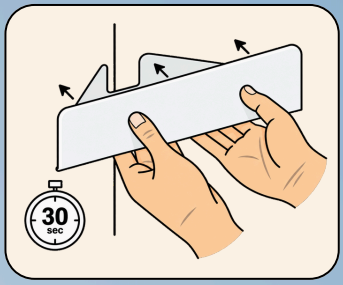

Now peel off the outer protective film of the adhesive strips. The liquid adhesive stays on the shelf.

⚠ *Not on the strips, not on the wall and do not spread it yourself.*

Step 4 – Mount the shelf
Place the shelf level against the wall and **press firmly for 30 seconds.**

Do not move it afterwards. Wipe off any excess adhesive immediately.

IMPORTANT: After mounting, please protect from moisture for 48 hours and do not put any load on it.
Caution: The corner must be exactly square (90°)!

- Holds on all smooth surfaces: **tiles, marble, glass and wood.**
- With grout joints, make sure the alignment is straight so the shelf sits flush.
- We recommend protecting the floor during the drying time.
- For cleaning, do not use abrasive or scratchy sponges.

Thank you for your trust

We are a young company from Bielefeld and our goal is your 100% satisfaction. We hope our product has convinced you, and we would be delighted to receive a short product review.
